ECONOMIC INFORMATION - QUARTER 4, FY 2019

The information in this section was prepared by the Massachusetts State Data Center (MassSDC) at the University of Massachusetts Donahue Institute Economic and Public Policy Research group. It may be relevant in evaluating the economic and financial condition and prospects of the Commonwealth of Massachusetts. The State Data Center archives data about Massachusetts. The economic and demographic data, which have been obtained by the MassSDC from the sources indicated, do not necessarily present all factors that may have a bearing on the Commonwealth's fiscal and economic affairs.

All information is presented on a calendar-year basis unless otherwise indicated. **Information in the text, tables, charts, and graphs is current as of July 8th, 2019**. Dollars reflect 2018 inflation-adjusted dollars. As of last winter, data collection on Consumer Confidence for the state has been suspended, and data are not currently being updated for this measure. Sources of information are indicated in the text or immediately following the charts and tables, and also in the *Sources* section on the last page of the Exhibit A section. Although the Commonwealth considers the sources to be reliable, it makes no independent verification of the information presented herein and therefore does not warrant its accuracy.

<u>Population</u> (p. A-2)	<u>Massachusetts</u>	United States
Estimated Percent Change in Population, July 1, 2010 - July 1, 2018	5.1%	5.8%
Personal Income, Consumer Prices, and Poverty (p. A-8)		
Per Capita Personal Income, 2018 (2018 Dollars)	\$70,073	\$53,712
Average Annual Pay, All Industries, 2018 (2018 Dollars)	\$72,647	\$57,265

Percent Change in Gross Domestic Product, 2017-2018	2.7%	2.9%
Percent Change in International Exports, 2017-2018	-3.8%	5.2%
Percent Change in Housing Permits Authorized, 2017-2018	-3.9%	3.7%

Massachusetts is a densely populated state with a well-educated population, comparatively high income levels, and a relatively diversified economy. While the total population of Massachusetts has remained fairly stable in the last 25 years, significant changes have occurred in the age distribution of the population. Dramatic growth in residents between the ages of 20 and 44 since 1980 is expected to lead to a population distributed more heavily in the 65 and over age group in the next 25 years. Just as the working-age population has increased, income levels in Massachusetts since 1980 have grown significantly more than the national average, and a variety of measures of income show that Massachusetts residents have significantly higher amounts of annual income than the national average. These higher levels of income have been accompanied by a consistently lower poverty rate. State unemployment rates have typically remained below the national average with the exception of a slight increase during the recession of the early 1990s and a seventeen-month stretch between 2006 and 2007. More recently, Massachusetts unemployment has fallen below the national average and currently stands at 3.1 percent, compared to the national rate of 3.4 percent. In 2016, Massachusetts was ranked second in the U.S. according to the American Human Development Index, modeled after the United Nations Human Development Index, which compares health, income and education outcomes.

The following five sections provide detailed information on population characteristics, personal income, employment, human resources, economic base and performance, and infrastructure.

POPULATION CHARACTERISTICS

Massachusetts is a relatively slow growing but densely populated state with a comparatively large percentage of its residents living in metropolitan areas. The population density of Massachusetts was estimated as of July 1, 2018 to be 884.9 persons per square mile, as compared to 92.6 for the United States as a whole. Among the 50 states, only Rhode Island and New Jersey have a greater population density. Massachusetts also ranked just behind New Jersey and Rhode Island, as well as Delaware, in percentage of residents living in metropolitan areas. According to the current county-based definition, 98.6 percent of the state's population live in metropolitan areas.

The state's population is concentrated in its eastern portion. The city of Boston is the largest city in New England, with a July 1, 2017 population estimated at 694,583, or 10.1 percent of the total state population. Boston is the hub of the seven-county Boston-Cambridge-Newton, MA-NH Metropolitan Statistical Area (MSA), which includes the two southeastern New Hampshire counties, and had a total population as of July 1, 2018 estimated at 4,875,390, or 32.8 percent of the total New England population. The Cambridge-Newton-Framingham, MA Metropolitan Division is the largest component of that MSA, with a total population as of July 1, 2018 estimated at 2,405,352 while the Boston, MA Metropolitan division is the second largest component, with a total population estimated at 2,030,772.

The second largest MSA in the state is the Worcester, MA MSA, with a July 1, 2018 population estimated at 947,866. The city of Worcester, situated approximately 40 miles west of Boston with a July 1, 2018 estimated population of 185,877, is the second largest city, both in New England and the state. As a major medical and education center, the Worcester area is home to 18 patient care facilities and 13 colleges and universities, including the University of Massachusetts Medical School.

The third largest MSA in Massachusetts is the three-county Springfield, MA MSA, with a July 1, 2018 population estimated at 631,761. Springfield, the third largest city in the Commonwealth with a July 1, 2018 estimated population of 155,032, is located in the Connecticut River Valley in Western Massachusetts and enjoys a diverse body of corporate employers, including Baystate Health Systems and MassMutual Financial Group. In addition, Springfield is home to three independent colleges.

As the following graph and table (on the next page) indicate, the population in Massachusetts has generally grown at a rate similar to the population of New England and more slowly than the nation as a whole. From 2009 to 2018, Massachusetts' growth has more closely resembled that of the U.S. as a whole than that of New England, although growth began to increase again in 2016. According to the Census Bureau's latest revised estimates released in July 2018, the Massachusetts population has grown by only 8.5 percent since Census 2000, while the U.S. has grown 16.0 percent in that span.

EXHIBIT A-3 QUARTER 4, FY 2019

The following table compares the population level and percentage change in the population of Massachusetts to the sixstate New England region and to the United States.

EXHIBIT A-4 QUARTER 4, FY 2019

The next 12 years are expected to bring about a continued change in the age distribution of the Massachusetts population. As the following table and chart show, the share of the 65 and over age group and especially the 85 and over age group will continue to grow. The chart, table, and population pyramids (below, and on the following page) show the projected population by age for Massachusetts for 2000 through 2030. The Census has not updated these projections to reflect the 2010 Census.

	Projected Massachusetts Population by Age Group 2000-2030 (in thousands)													
Year	0-4	5-17	18-24	25-44	45-64	65-84	85+	All Ages	Mediaı Age

EXHIBIT A-6 QUARTER 4, FY 2019

Migration. Migration is one of several components of annual population change in Massachusetts. The movement of people from place to place is often linked to economic opportunities or downturns. These data are derived from the filing addresses and number of exemptions submitted with federal tax returns. A tax filer is considered a migrant when he/she files a tax return with an address different from the previous year's filing address. Of the New England states, New Hampshire was the largest net loss for Massachusetts and Connecticut was the largest net gain for Massachusetts from 2001 through 2016. Massachusetts also sends many more migrants to other U.S. states than it gains. Its largest net losses outside of New England are to Florida, California, North Carolina, and Texas while its largest net gains are from New York, New Jersey, Pennsylvania and Illinois. The charts below illustrate the net migration for Massachusetts to and from the New England states and the rest of the country using IRS data.

EXHIBIT A-7 QUARTER 4, FY 2019

PERSONAL INCOME, CONSUMER PRICES, AND POVERTY

Personal Income. Real per capita income levels in Massachusetts have varied over time. Between 1992 and 1997, real per capita income levels in the Commonwealth increased faster than the national average. In 2000, Massachusetts had its highest per capita income growth in 16 years, exceeding the national growth rate by 2.3 percentage points. From 2001 to 2003, real income declined in Massachusetts while staying roughly flat for the nation. However, real income levels in Massachusetts remained well above the national average. Following a significant decline in 2009, Massachusetts, New England, and the U.S. steadily increased until 2012. Overall, between 2006 and 2012, Massachusetts personal income increased considerably faster than the nation during the recession and its aftermath. In 2013, Massachusetts, New England, and the U.S. all experienced a slight decline in real income. From 2014 to 2018, real per capita income rose in the state, New England, and the nation. Massachusetts per capita personal income remains higher than the nation. At the state level in 2018, only the District of Columbia and Connecticut had higher levels of per capita personal income.

The following graph illustrates these changes in real per capita personal income in Massachusetts, New England, and the United States since 1970.

			Per Cap	oita Personal	Income,	1971-2018

The following table compares per capita personal income in Massachusetts, New England, and the United States for the period 1971-2018.

SOURCE: U.S. Bureau of Economic Analysis. NOTE: Using midyear population estimates from the Census Bureau and two CPI-U series from the U.S. Bureau of Labor Statistics for price

Average Annual Pay. Massachusetts saw steady growth in average annual pay for most of the past fifteen years, adjusted for inflation. It lost ground in 2009, but resumed growth in 2010, and dropped slightly again in 2016. Payroll data are reported to the Quarterly Census of Employment and Wages (QCEW) by all employers covered under the Unemployment Insurance programs, and summary data are released. Average annual pay is computed by dividing the total annual payroll of employees covered by Unemployment Insurance programs by the average monthly number of employees from the data in the QCEW. Since 2005, average annual wages in the state have grown at an annual rate of 0.9 percent, compared to 0.7 percent for the nation. The level of average annual pay in Massachusetts in 2018 was almost 27 percent higher than the national average: \$72,647 compared to \$57,265.

Annual Wage and Salary Disbursements. Wage and salary disbursements by place of work is a component of personal income and measures monetary disbursements to employees. This includes compensation of corporate officers, commissions, tips, bonuses, and receipts in-kind. Although the data are recorded on a place-of-work basis, they are then adjusted to a place-of-residence basis so that the personal income of the recipients whose place of residence differs from their place of work will be correctly assigned to their state of residence. The table below details Wage and Salary Disbursements since 1990. Between 1998 and 2000, the Massachusetts share of New England and overall U.S. totals increased. In subsequent years, the Massachusetts share of New England and the U.S. decreased slightly until 2006. Since then, Massachusetts' share of New England has risen steadily while its share of the U.S. has stayed roughly the same. In 2018, the shares were 53.8 and 3.0 percent respectively.

EXHIBIT A-10 QUARTER 4, FY 2019

Consumer Prices. Higher income levels in Massachusetts relative to the rest of the United States are offset to some extent by the higher cost of living in Massachusetts. The following graph presents consumer price trends for the Boston metropolitan area and the United States for the period between May 2009 and May 2019. The latest available data for May 2019 show that the CPI-U for the Boston area increased at a rate of 2.3 percent over May 2018. The U.S. index increased at a rate of 1.8 percent over the same period.

In 2009, the Boston metropolitan area and U.S. experienced their first monthly year-over-year declines in the CPI-U since 1954 and 1955, respectively. The 2018 U.S. CPI-U increased 15.2 percent since 2010 while Boston's CPI-U increased 16.2 percent during that period. Between 2014 and 2018, Boston's Consumer Price Index increased by 8.1 percent while in the United States as a whole, CPI-U increased by 6.1 percent. The table on the following page shows the annual average of the Consumer Price Index for All Urban Consumers (CPI-U) and the percentage change in that average from the previous year from 1970 through the present.

Consumer Confidence, Present Situation, and Future Expectations. These three measures offer multiple insights into consumer attitudes. The U.S. measures are compiled from a national monthly survey of 5,000 households and are published by The Conference Board, Inc. The survey for Massachusetts is conducted in a similar manner and the results are published by MassInsight, based on quarterly polling of 450 adult residents of Massachusetts. The "Present Situation" index measures consumers' appraisal of business and employment conditions at the time of the survey. The "Future Expectations" index focuses on consumers' expectations for six months hence regarding business and employment conditions, as well as expected family income. The overall "Consumer Confidence" index is a weighted average of the two sub-indices. Although the U.S. measures are compiled by a different source than the Massachusetts measures, according to the Federal Reserve Bank of Boston, the numbers are generally comparable. A score of 100 is considered neutral.

According to the Conference Board, consumer confidence nationally reached a six-year high of 137.9 in October 2018. The all-time quarterly low reading was 37.4 in January 2009. The Massachusetts index has generally been higher than the U.S. index since sharing lows in January 2009, except for brief periods as they tracked closely together in 2011 and experienced slight dips in July of 2013 and 2014 as well as in April 2018.

In the fourth quarter of FY 2018, Consumer Confidence for Massachusetts rose to 133.0, up from 127.0 in the most recent quarter for which consumer confidence was produced for the state. The U.S. has surpassed its pre-recessionary (2007) levels and stood at 137.9 in the fourth quarter of FY 2018. The following graph and table detail the recent record of these measures. It should be noted that data collection on Consumer Confidence for the state has been suspended, and data from it are not currently being updated.

EXHIBIT A-14 QUARTER 4, FY 2019

Poverty. Since 2005, the Massachusetts poverty rate, which was 10.5 percent in 2017, has been three to four percentage points lower than the national average, which was 13.4 percent in 2017. Massachusetts ranked 43^{rd} out of the 50 states and the District of Columbia in 2017, for percent of persons whose ratio of income to the poverty level was below 100 percent in the past 12 months. Poverty status is not determined for all people. Institutionalized people, people in military quarters, people in college dormitories, and unrelated individuals under 15 years old are excluded.

EXHIBIT A-15 QUARTER 4, FY 2019

Transfer Payments. Transfer payment income is payment to individuals from all levels of government and from businesses for which no current services are performed, including payments to nonprofit institutions serving individuals. These payments accounted for 14.8 percent of total personal income in Massachusetts in 2017, decreasing from 14.9 percent in 2016. The chart below does not include transfer payments from businesses or payments to non-profit organizations. Total transfer payments to individuals in Massachusetts from governments and businesses totaled \$68.7 billion for 2017, adjusted for inflation. Fifty one percent of government transfer payments to individuals were medical payments, down from 51.6 percent in 2016.

EXHIBIT A-16 QUARTER 4, FY 2019

Health Insurance Coverage. Massachusetts leads the nation in the percent of individuals with health insurance coverage. Massachusetts passed legislation in 2006 mandating universal coverage in the Commonwealth. In 2017, 97.2 percent of the civilian non-institutionalized population was covered in the state by either private or public insurance, compared with 91.3 percent nationwide. Massachusetts also leads the other New England states in coverage, with Rhode Island and Vermont as the next closest at 95.4 percent. All of the New England states have higher rates of coverage than the nation. These data do not indicate the comprehensiveness of coverage, however.

EXHIBIT A-17 QUARTER 4, FY 2019

EMPLOYMENT

Employment by Industry. The chart on this page shows the annual level of non-agricultural payroll employment in Massachusetts based on the North American Industry Classification System (NAICS) for the seven largest NAICS supersectors starting with 1990, the earliest year for which NAICS data are available. The chart on the following page compares the supersector shares for 2018 with the corresponding shares for 1998. Like many industrial states, Massachusetts has seen a steady decline of its manufacturing jobs over the last two decades, not only as a share of total employment, but also in absolute numbers of jobs. Several NAICS service sectors, Education and Health Services, Professional and Business Services, and Leisure and Hospitality have grown to take the place of manufacturing in driving the Massachusetts economy and now account for almost half of total payroll employment, while Financial Activities, Government, Information, and Trade, Transportation & Utilities have remained relatively level or declined in share.

After significant declines in 2009, total non-agricultural employment in Massachusetts eventually increased 0.3 percent and continued to grow steadily, until 2017. In 2018, nonfarm employment decreased by 1.9 percent in 2018, the first fall in nonfarm employment since 2009. With an annual average slightly over 3.6 million nonfarm employees, 2017 had the highest numbers to date.

After years of moderate but steady declines or near-zero growth in the late nineties and early 2000s, manufacturing employment in the state experienced steep annual declines in 2002 (10.3 percent) and 2003 (7.0 percent) before returning to a more moderate decline in 2004 (3.5 percent). After a steep drop of 9.6 percent in 2009, the decline returned to a less dramatic 2.4 percent in 2010. May 2019 saw manufacturing employment decrease by 1.6 percent since May of 2018, even as total employment fell. The annual manufacturing employment total in 2018 was slightly higher than in 2017 (244.9 thousand compared to 244.2).

*Includes Mining & Natural Resources, Construction, Information, and Other Services.

EXHIBIT A-19 QUARTER 4, FY 2019

Largest Employers in Massachusetts. The following inset lists the 19 largest private employers in Massachusetts based upon employment covered by the Unemployment Insurance system for FY 2018. The 2018 list is nearly identical to the 2017 list, except that Tufts University is now among the top 19 and Big Y Foods, Inc. is no longer in the top listing. The list does not include employers whose headquarters are located outside of Massachusetts, and it may not include some employers who do business in the state under multiple legal names or register each facility as a separate employer.

(listed d	alphabetically)
Bay State Medical Center, Inc	Partners Healthcare Systems, Inc.
Beth Israel Deaconess Medical Center	Raytheon Company
Boston Medical Center Corporation	The Stop & Shop Supermarkets Corporation
Boston University	Shaw's Supermarkets, Inc.

Massachusetts Companies in the Fortune 500 List. Massachusetts is home to the headquarters of 34 Fortune 500 companies. The top 12 companies are shown in the table below. When comparing the 2019 Fortune 500 list to the 2018 list, eight Massachusetts companies gained and two lost rank. Thermo Fisher Scientific, located in Waltham, climbed 20 places on the list, while Boston-based Liberty Mutual Insurance Company fell seven places. General Electric relocated its headquarters from Fairfield, CT to Boston in May 2017 and leads the top Fortune 500 companies in the state with \$120.3 billion in revenues.

EXHIBIT A-20 QUARTER 4, FY 2019

Unemployment Insurance Trust Fund. The unemployment insurance system is a federal-state cooperative program established by the Social Security Act and the Federal Unemployment Tax Act to provide for the payment of benefits to eligible individuals when they become unemployed through no fault of their own. Benefits are paid from the Commonwealth's Unemployment Insurance Trust Fund, financed through employer contributions. The assets and liabilities of the Commonwealth Unemployment Insurance Trust Fund are not assets and liabilities of the Commonwealth.

As of April 30, 2019, the preliminary Massachusetts Unemployment Trust Fund had a balance of \$1.759 billion. This balance is the sum of the private contributory account balance of \$1.627 billion and the government contributory portion of \$132 million. This compares to the April 30, 2018 balance of \$1.318 billion with a private contributory portion of \$1.202 billion. The May 2019 Unemployment Insurance Trust Fund report indicated that the private contributory account balance was estimated to be \$587 million by the end of 2023, according to the Moody's-based outlook.

Unemployment. The unemployment rate in Massachusetts was consistently below or equal to the national average from mid-1995 through September 2005, with similar patterns of gradual improvement after the mid-2003 peak. The Massachusetts rate was greater than or equal to the U.S. rate for 19 months between January 2006 and June 2007, but has not exceeded the U.S. rate since then. The Massachusetts rate peaked at 9.6 percent in January 2010, the same month that the U.S. rate peaked at 10.6 percent. From July 2007 onward, the state rate remained equal to or below the comparable (not seasonally adjusted) U.S. unemployment rate.

Since reaching 6.7 percent in January 2014, the Massachusetts unemployment rate has gradually declined to 3.1 percent in May 2019, below the national rate of 3.4 percent. The tables and graphs on the following two pages compare the unemployment rate in the state with those in New England and the U.S.

EDUCATION AND TECHNOLOGY

Educational Attainment. The availability of a skilled and well-educated population is an important resource for the Commonwealth. Only the District of Columbia had a higher percentage of adults with a bachelor's degree or higher in 2017, according to the Census Bureau's American Community Survey (ACS). The Census also reported that Massachusetts ranked 31^{st} in persons who had not completed high school, at 9.2 percent of the population age 25 or older, less than the national average of 12.0 percent. Massachusetts' black and Hispanic populations achieved college degrees at a lower rate than its white population, but their rates were higher than the national averages. The most current ACS data are shown below.

EXHIBIT A-24 QUARTER 4, FY 2019

Higher Education Data. The table below compares Massachusetts residents' higher education enrollment by race and Hispanic origin to the U.S. There were 1.8 percent fewer people enrolled in college in the U.S. in 2017 compared to 2016. The proportion of total enrollment in Massachusetts also fell by 0.4 percent.

Higher Education Enrollment by Race and Hispanic Origin in 2017											
	Total	White alone	Black alone	Asian alone	All other races	Hispanic or Lating					
United States	22,294,251	66.6%	14.6%	8.9%	9.9%	18.1%					
Massachusetts	583,898	70.3%	10.4%	11.8%	7.5%	11.5%					

SOURCE: U.S. Census Bureau, American Community Survey, 1-Year Estimates

NOTE: The Hispanic or Latino Origin category includes all Hispanics in the population regardless of race and therefore should not be added to the other categories to avoid double-counting races.

Survey data released by the Institute of International Education state that 68,192 foreign students were enrolled in Massachusetts colleges and universities in the 2017/2018 school year. This was an increase of 8.4 percent from the previous year. The national enrollment increased 1.5 percent. Massachusetts remains fourth ranked among states for foreign student enrollment.

The graphs and table on the following page provide information about higher education enrollment, degrees conferred, and research and development expenditures at colleges and universities.

U.S. Department of Education data show that from 2016 to 2017, higher education enrollment decreased 0.4 percent in the United States and 0.4 percent at Massachusetts institutions. During the 2000-2017 period, enrollment in public higher education increased 23.9 percent in the United States and 16.4 percent at Massachusetts institutions. Enrollment in private institutions increased 46.2 percent in the United States and 22 percent at Massachusetts institutions.

Research and development expenditures at universities and colleges increased 22 percent in the United States and 44 percent in Massachusetts between 2008 and 2017.

EXHIBIT A-25 QUARTER 4, FY 2019

EXHIBIT A-26 QUARTER 4, FY 2019

Internet Access. Massachusetts has the ninth highest household internet subscription rate in the U.S., according to the Census Bureau's 2017 American Community Survey.

Patents. The U.S. Patent and Trademark Office notes: "This report shows the number of U.S. patent documents (i.e., utility patents, design patents, plant patents, reissue patents, defensive publications, and statutory invention registrations) granted since 1977, broken down by the state or country of origin (patent origin is determined by the residence of the first-named inventor)."

In 2015, Massachusetts was fourth among all states for the number of new patents issued. Only six nations originated more U.S. patents than Massachusetts, putting the state on par with Canada for origination of U.S. patents. Since 1977, Massachusetts has received more new patents than any other New England state. With 6,777 new utilities patents and 7,234 total new patents in 2015, a 2.2 percent increase in total patents since 2014, Massachusetts innovators were responsible for 62 percent of the new patents in New England.

EXHIBIT A-27 QUARTER 4, FY 2019

Primary and Secondary Education Expenditures. Massachusetts has spent from 16.5 to 37.0 percent more per pupil on primary and secondary education than the national average since 1994. During the 2016-2017 school year, the average Massachusetts per student expenditures increased 1.7 percent to \$16,592. Massachusetts was ranked eighth in the nation among states and the District of Columbia in 2017. The table and chart below show expenditures per pupil for Massachusetts and the U.S.

EXHIBIT A-28 QUARTER 4, FY 2019

National Assessment of Educational Progress (NAEP) scores. The National Assessment of Educational Progress (NAEP), also known as "the Nation's Report Card," is the only nationally representative and continuing assessment of what America's students know and can do in various subject areas. Since 1969, assessments have been conducted periodically in reading, mathematics, science, writing, U.S. history, civics, geography, and the arts. Under the current structure, the Commissioner of Education Statistics, who heads the National Center for Education Statistics in the U.S. Department of Education, is responsible by law for administering the NAEP project.

Since 1990, NAEP assessments have also been conducted to give results for participating states. Those that choose to participate receive assessment results that report on the performance of students in that state. In its content, the state assessment is identical to the assessment conducted nationally. However, because the national NAEP samples were not and are not currently designed to support the reporting of accurate and representative state-level results, separate representative samples of students are selected for each participating jurisdiction/state. The graphs below compare the data available for Massachusetts and the national public samples.

ECONOMIC BASE AND PERFORMANCE—STATE OVERVIEW

Comparing BEA GDP for the U.S., the region, and Massachusetts. The U.S. Bureau of Economic Analysis (BEA) defines Gross Domestic Product by State (GDP) as "the value added in production by the labor and property located in a state. GDP for a state is derived as the sum of the gross state product originating in all industries in a state. In concept, an industry's GDP, referred to as its 'value added', is equivalent to its gross output (sales or receipts and other operating income, commodity taxes, and inventory change) minus its intermediate inputs (consumption of goods and services purchased from other U.S. industries or imported)."

The BEA provides national (in January) and state (in June) annual and quarterly GDP estimates. MassBenchmarks releases quarterly estimates of Massachusetts economic activity. This is reported in the following section. While we do not have access to many of the components that the BEA uses to calculate state GDP in advance of its release, we provide an overview of our state's components when they are available. Additionally, we provide state economic indexes and industrial sector data that are released more frequently and in some cases, are among the components used to calculate state GDP.

Real GDP: Percent Change from Preceding Quarter (Seasonally Adjusted Annual Rates)

SOURCES: U.S. Bureau of Economic Analysis, MA MassBenchmarks calculations by Dr. Alan Clayton-Matthews. Seasonally adjusted annual rates are quarterly data adjusted to an annual basis. NOTE: Shaded areas are recession periods.

EXHIBIT A-30 QUARTER 4, FY 2019

ECONOMIC BASE AND PERFORMANCE—ECONOMIC INDICATORS

State Coincident Indexes. To track more recent changes in the state and national economies, we use the Federal Reserve Bank of Philadelphia's Coincident Indexes. It:

...produces a monthly coincident index for each of the 50 states. The indexes are released a few days after the Bureau of Labor Statistics (BLS) releases the employment data for the states.

The coincident indexes combine four state-level indicators to summarize current economic conditions in a single statistic. The four state-level variables in each coincident index are nonfarm payroll employment, average hours worked in manufacturing, the unemployment rate, and wage and salary disbursements deflated by the consumer price index (U.S. city average). The trend for each state's index is set to the trend of its gross domestic product (GDP), so long term growth in the state's index matches long term growth in its GDP. (https://www.phil.frb.org/ research-and-data/regional-economy/indexes/coincident/)

The graph below indicates the state and national index change from 12 months prior. Recent revisions to BLS data that the Philadelphia Federal Reserve Bank uses to construct its indexes resulted in an improved trend for Massachusetts since the recession ended in 2009. The table below compares the Massachusetts index to its New England neighbors and the U.S.

Area	June 2019	1-Month Change	3-Month Change	12-Month Change
U.S.	128.3	0.3%	2.0%	4.1%
Massachusetts	142.6	0.4%	1.2%	4.7%
Connecticut	127.8	0.4%	0.4%	3.4%
Maine	127.0	0.7%	1.9%	1.5%
New Hampshire	146.8	0.2%	0.8%	3.8%
Rhode Island	128.1	0.5%	1.6%	3.5%
Vermont	140.1	0.4%	2.2%	5.4%

Comparing the U.S. and Massachusetts Coincident Indexes

SOURCE: Federal Reserve Bank of Philadelphia.

NOTES: Shaded areas are recession periods. Indexes are set to 2007 annual averages. Methodology changes in January 2018 resulted in revised values for historical data.

EXHIBIT A-31 QUARTER 4, FY 2019

Institute for Supply Management Purchasing Manager Indexes (PMI). These indexes are compiled using survey data from purchasing and supply executives and are used as a leading business indicator. While the national index is based on a survey of manufacturers, the Boston region's is based on a survey of "companies representing industries as diverse as the banking and financial services, pharmaceuticals and biotechnology, software development and communication, medical products and equipment, computers, chemicals, consumer products, education, and the public sector." It should be noted that the Boston survey has been suspended, and consequently, data from it are not currently being updated.

Index readings above 50 indicate the economy is generally expanding. Readings below 50 indicate the economy is generally contracting, although a reading above 42 for a period of time indicates the economy is generally expanding. Components of the national index include new orders, production, employment, supplier deliveries, inventories, customer inventories, prices, backlog of orders, exports, and imports. The Boston region's components are slightly different and include new orders, production, employment, supplier deliveries, raw monthly materials inventory, business confidence, commodity prices, product prices, new export orders, order backlog, and finished goods inventories. These components show which segments of the business supply chain are expanding or contracting.

The June 2016 national index indicated that the manufacturing sector has been expanding since December 2015, with the exception of a small dip in April 2016. The Boston region's June 2015 (the last date for which data were available) index of 32.3 indicated that overall business conditions were contracting after hitting a four-year high of 58.5 in November 2014.

ECONOMIC BASE AND PERFORMANCE—INTERNATIONAL TRADE

Total Trade Volume. Total trade volume, exports and imports, decreased 1.22 percent from 2017 to \$62.8 billion in 2018. Canada's trade volume was \$11 billion and, at 16.8 percent of the total state trade, it was by far our most valuable trading partner. Massachusetts trade deficit, \$8.5 billion, increased 19.4 percent in 2018. See appendix 8 for more trade data.

Exports. Massachusetts ranked 19th in the United States in 2018 and first in New England with \$27.2 billion in exports. This was a 3.8 percent decrease from the previous year's export value, while national exports increased by 5.2 percent. Total exports from New England increased by 2.3 percent. Canada was again our top export destination in 2018 with \$3.1 billion.

Imports. Imports increased 0.86 percent to \$35.6 billion in 2018. Canada was also the largest source for Massachusetts imports in 2018, from which we imported \$7.4 billion or 20.9 percent of our total.

ECONOMIC BASE AND PERFORMANCE—INDUSTRY SECTOR DETAIL (NAICS BASIS)

The Massachusetts economy remains diversified among several industrial and non-industrial sectors. The four largest sectors of the economy are real estate, rental and leasing; professional and technical services; government; and manufacturing, which contributed 46.3 percent of the GDP in 2018. The real estate, rental and leasing sector remained the largest contributor in 2018. The following bar chart displays the latest sector contributions to the Massachusetts GDP.

GDP Subsectors. When measured in inflation-adjusted dollars, the change in Massachusetts total GDP grew 25.2 percent between 2008 and 2018. Between 2008 and 2017 (the latest data available for subsector data), several industries grew much faster than the state average. Industry subsectors that experienced substantial cumulative growth or reduction are listed in the following chart.

NAICS* Industry Subsector	Percent Change 2008-201
Support activities for mining	343.0%
Securities, commodity contracts, and other financial investments and related activities	184.2%
Air transportation	109.0%
Performing arts, spectator sports, museums, and relat- ed activities	108.3%
Oil and gas extraction	-70.7%
Amusement, gambling, and recreation industries	68.1%
Mining (except oil and gas)	67.4%
Computer systems design and related services	64.4%

EXHIBIT A-37 QUARTER 4, FY 2019

Industry Sector Analysis. The following section contains a summary for each of the twenty major NAICS* sectors. The data series show a ten-year time span. Graphs include data value labels for the latest annual points.

Not all datasets are reported for all of the major NAICS sectors. The Massachusetts Department of Workforce and Labor Development's Employment and Wages (ES-202) data series are available for every sector and contain the number of establishments, average monthly employment, total annual wages and average weekly wages for establishments with employees. The data are reported quarterly and annually for employees in the private, federal government, state government, and local government sectors. **NOTE:** Beginning with the first Quarter 2013, a code change for employees from private households (NAICS 814110) into services for the elderly and persons with disabilities (NAICS 624120) moved 33,960 employees in Massachusetts in January 2013.

The nonemployer businesses and receipts graph uses the U.S. Census Nonemployer Statistics series and is available for every sector except 55 - Management of Companies and Enterprises and 92 - Public Administration. Some sectors also lack subsector (at the four-digit NAICS level) detail. Nonemployer annual data have a two-year reporting lag for businesses that do not have paid employees and are subject to federal income tax. The Census reports that "Nonemployers account for a majority of all business establishments, but average less than four percent of all sales or receipts." These can be second or part-time businesses and not the owner's primary source of income.

State Gross Domestic Product is an annual series from the U.S. Bureau of Economic Analysis's Regional Economic Accounts. For more information, please visit:

http://www.bea.gov/newsreleases/regional/gdp_state/qgsp_newsrelease.htm

Foreign exports from the U.S. Census Bureau's Foreign Trade Division and WISERTrade, are available for four industries on a monthly basis. Total state exports are available on a monthly basis. Sector exports and the top ten export destinations for this industry sector are by dollar value.

Each sector analysis has a summary at the bottom of each page. The summary provides (when available):

- 1. GDP contribution to state total: this sector's GDP divided by the state's total GDP. A green figure in the text at the bottom of the page indicates it is larger than the previous year's GDP contribution. Red indicates it is smaller than the previous year's and black indicates no change from the previous year's GDP contribution.
- 2. GDP rank: this sector's GDP rank versus all state sectors. A green figure in the text at the bottom of the page indicates that it is higher than the previous year's rank. Red indicates that it is lower than the previous year's and black indicates that there was no change from the previous year's GDP rank.
- 3. Nonemployer to employer establishment ratio: the number of nonemployer establishments divided by the number of establishments with employers. In general, a ratio greater than one means there are more small businesses, while a number less than one means there are more large businesses.
- 4. Establishments with employees: the subsector with the largest number of establishments who have employees.
- 5. Nonemployer establishments: the subsector with the largest number of establishments that do not have employees.
- 6. Employees: the subsector with the largest number of employees, at establishments with employees.
- 7. Annual wages: the subsector with the largest total annual wages, at establishments with employees.
- 8. Average weekly wage: the subsector with the largest average weekly wage, at establishments with employees.
- 9. Annual receipts at nonemployer establishments: the subsector with the most receipts, at establishments that do not have employees.
- 10. Most valuable export: the subsector export with the highest dollar value.

*North American Industry Classification System.

Note: Total Wage, State Gross Domestic Product, Average Weekly Wage, Nonemployer Receipts, and Sector Exports are all inflation-adjusted to 2018.

NAICS 11 - Agriculture, Forestry, Fishing & Hunting. The Agriculture, Forestry, Fishing and Hunting sector comprises establishments primarily engaged in growing crops, raising animals, harvesting timber, and harvesting fish and other animals from a farm, ranch, or their natural habitats.

SOURCE: Massachusetts Executive Office of Labor and Workforce Development.

Summary.

GDP contribution to state total: **0.14%** GDP rank: **19 of 20** Nonemployer to employer establishment ratio: **4.5 to 1**

Sector leaders. Industry subsectors with the majority of establishments, employees, payroll and receipts. Establishments with employees: Fishing Nonemployer establishments: Fishing Employees: Greenhouse and nursery production Annual wages: Fishing Average weekly wage: Fishing Annual receipts at nonemployer establishments: Fishing Most valuable export: Fish, fresh, chilled, or frozen and other marine products

*For this 2-digit industry, Nonemployer data are available only for 113-115 (Forestry, fishing & hunting & agricultural support services).

EXHIBIT A-39 QUARTER 4, FY 2019

NAICS 21 - Mining. The Mining, Quarrying, and Oil and Gas Extraction sector comprises establishments that extract naturally occurring mineral solids, such as coal and ores; liquid minerals, such as crude petroleum; and gases, such as natural gas. The term mining is used in the broad sense to include quarrying, well operations, beneficiating (e.g., crushing, screening, washing, and flotation), and other preparation customarily performed at the mine site, or as a part of mining activity.

Summary.

GDP contribution to state total: 0.05%

GDP rank: 20 of 20

Nonemployer to employer establishment ratio: 0.9 to 1

Sector leaders. Industry subsectors with the majority of establishments, employees, payroll and receipts.

Establishments with employees: Nonmetallic mineral mining and quarrying

Nonemployer establishments: Nonmetallic mineral mining and quarrying

Employees: Nonmetallic mineral mining and quarrying

Annual wages: Nonmetallic mineral mining and quarrying

Average weekly wage: Support activities for mining

Annual receipts at nonemployer establishments: Nonmetallic mineral mining and quarrying

Most valuable export: Minerals and ores

SOURCE: Massachusetts Executive Office of Labor and Workforce Development.

EXHIBIT A-40 QUARTER 4, FY 2019

NAICS 22 – Utilities. The Utilities sector comprises establishments engaged in the provision of the following utility services: electric power, natural gas, steam supply, water supply, and sewage removal. See the appendix, pages five and six for supplemental tables regarding electricity generation, supply and capacity.

\$0 2008 2009 2010 2011 2012 2013 2014 2015 2016 2017

Summary. GDP contribution to state total: 1.2% GDP rank: 18 of 20 Nonemployer to employer establishment ratio: 1.2 to 1

Sector leaders. Industry subsectors with the majority of establishments, employees, payroll and receipts. Establishments with employees: Power generation and supply Nonemployer establishments: Subsector detail N/A Employees: Power generation and supply Annual wages: Power generation and supply Annual wages: Power generation and supply

Average weekly wage: Natural gas distribution

Annual receipts at nonemployer establishments: Subsector detail N/A

EXHIBIT A-41 QUARTER 4, FY 2019

NAICS 23 – Construction. The Construction sector comprises establishments primarily engaged in the construction of buildings or engineering projects (e.g., highways and utility systems). Establishments primarily engaged in the preparation of sites for new construction and establishments primarily engaged in subdividing land for sale as building sites also are included in this sector. See the appendix pages two through four for housing permits, housing sales, and housing sale prices.

SOURCE: Massachusetts Executive Office of Labor and Workforce Development.

State export data are not available for this sector.

Summary. GDP contribution to state total: 3.6% GDP rank: 10 of 20 Nonemployer to employer establishment ratio: 2.7 to 1

Sector leaders. Industry subsectors with the majority of establishments, employees, payroll and receipts. Establishments with employees: Building equipment contractors

Nonemployer establishments: Building finishing contractors

Employees: Building equipment contractors

Annual wages: Building equipment contractors

Average weekly wage: Utility system construction

Annual receipts at nonemployer establishments: Residential building construction

Year SOURCE: Massachusetts Executive Office of Labor and Workforce Development.

NAICS 31-33 – **Manufacturing.** The Manufacturing sector comprises establishments engaged in the mechanical, physical, or chemical transformation of materials, substances, or components into new products. The assembling of component parts of manufactured products is considered manufacturing, except in cases where the activity is appropriately classified in Sector 23, Construction.

Summary.

GDP contribution to state total: 9.4%

GDP rank: **5 of 20** Nonemployer to employer establishment ratio: **0.9 to 1**

Sector leaders. Industry subsectors with the majority of establishments, employees, payroll and receipts. Establishments with employees: Iron and steel mills and fernalloy manufacturing

Nonemployer establishments: Other miscellaneous manufacturing

Employees: Electrical equipment manufacturing

Annual wages: Electrical equipment manufacturing

Average weekly wage: Communications equipment manufacturing

Annual receipts at nonemployer establishments: Other miscellaneous manufacturing

Most valuable export: Computer and electronic products

EXHIBIT A-43 QUARTER 4, FY 2019

NAICS 42 - Wholesale Trade. The Wholesale Trade sector comprises establishments engaged in wholesaling merchandise, generally without transformation, and rendering services incidental to the sale of merchandise. The merchandise described in this sector includes the outputs of agriculture, mining, manufacturing, and certain information industries, such as publishing. The wholesaling process is an intermediate step in the distribution of merchandise.

State export data are not available for this sector.

Summary. GDP contribution to state total: 5.1% GDP rank: 8 of 20 Nonemployer to employer establishment ratio: 0.5 to 1

Sector leaders. Industry subsectors with the majority of establishments, employees, payroll and receipts. Establishments with employees: Electronic markets and agents and brokers

Nonemployer establishments: Miscellaneous durable goods merchant wholesalers

Employees: Electronic markets and agents and brokers

Annual wages: Electronic markets and agents and brokers

Average weekly wage: Druggists' goods merchant wholesalers

Annual receipts at nonemployer establishments: Miscellaneous durable goods merchant wholesalers

NAICS 44-45 - Retail Trade. The Retail Trade sector comprises establishments engaged in retailing merchandise, generally without transformation, and rendering services incidental to the sale of merchandise. The retailing process is the final step in the distribution of merchandise; retailers are therefore organized to sell merchandise in small quantities to the general public. This sector comprises two main types of retailers: store and nonstore retailers.

State export data are not available for this sector.

Summary. GDP contribution to state total: 4.0% GDP rank: 9 of 20 Nonemployer to employer establishment ratio: 1.3 to 1

Sector leaders. Industry subsectors with the majority of establishments, employees, payroll and receipts. Establishments with employees: Health and personal care stores Nonemployer establishments: Direct selling establishments

Employees: Health and personal care stores

Annual wages: Health and personal care stores

Average weekly wage: Florists

Annual receipts at nonemployer establishments: Direct selling establishments

SOURCE: Massachusetts Executive Office of Labor and Workforce Development

NAICS 48-49 - Transportation and Warehousing. The Transportation and Warehousing sector includes industries providing transportation of passengers and cargo, warehousing and storage for goods, scenic and sightseeing transportation, and support activities related to modes of transportation. Establishments in these industries use transportation equipment or transportation related facilities as a productive asset. The type of equipment depends on the mode of transportation. The modes of transportation are air, rail, water, road, and pipeline. See pages six and seven of the appendix for more information regarding transportation and warehousing.

State export data are not available for this sector.

Summary.

GDP contribution to state total: 1.8% GDP rank: 16 of 20 Nonemployer to employer establishment ratio: 9.1 to 1

Sector leaders. Industry subsectors with the majority of establishments, employees, payroll and receipts.

Establishments with employees: General freight trucking

Nonemployer establishments: Taxi and limousine service

Employees: Warehousing and storage

Annual wages: Warehousing and storage Average weekly wage: Pipeline transportation of natural gas

ECONOMIC BASE AND PERFORMANCE—GOVERNMENT REVENUES AND SPENDING

Federal Spending in Massachusetts. Massachusetts received approximately \$53.6 billion in contracts, grants, direct payments, insurance, loans and guarantees, and other spending from the federal government in federal fiscal year (FFY) 2017. Massachusetts received 2.0 percent of all federal spending in FFY 2017 versus 2.0 percent in FFY 2016. Federal dollars to Massachusetts have dropped since FFY 2012. Massachusetts federal contracts declined from FFY 2012 to FFY 2014, increased 5.2 percent in FFY 2015, declined 3.9 percent in FFY 2016, and declined 1.2 percent in FFY 2017. The proportion of all Massachusetts federal contracts has averaged 2.9 percent over the last ten years.

2010	\$/5.3	-4.2%	\$2,814.0	-16.4%
2011	\$68.8	-8.6%	\$3,585.4	27.4%
2012	\$85.3	24.0%	\$4,102.1	14.4%
2013	\$87.0	2.0%	\$4,145.2	1.1%
2014	\$70.8	-18.6%	\$2,868.3	-30.8%
2015	\$60.7	-14.3%	\$2,945.7	2.7%
2016	\$63.6	4.8%	\$3,136.2	6.5%
2017	\$53.6	-15.7%	\$2,639.5	-15.8%

SOURCE: http://www.usaspending.gov as of 01/09/18.

NOTE: Federal fiscal data reporting is not complete until January of the following year due to the three month lag in DOD reporting. Dollar values and change in dollar values reflect inflation-adjusted (\$2017) dollars.

In FFY 2017, the largest portion of federal spending in Massachusetts, 41.0 percent, was for Other Financial Assistance. This includes direct payments to individuals (such as Medicare and food stamps), insurance payments (such as unemployment benefits, flood insurance), and other types of assistance payments (such as reimbursements for prescriptions for veterans). Other Financial Assistance decreased by 27.5 percent, Contracts decreased by 1.2 percent, and Grants increased by 628.3 percent from FFY 2016. The graphs below describe the most recent complete fiscal year and the last nine years of federal spending in Massachusetts, including the most recent data for the current fiscal year as reported by USASpending.gov.

Federal Contracts. The table and graph below compare the annual summary of federal contracts performed in Massachusetts to the total contracts awarded by the federal government. In FFY 2017, the latest full year available, 2.6 percent of all federal contract work was performed in Massachusetts. This is slightly less than the 2.9 percent average over the last ten years.

The following two pages summarize the federal contracts by top products or services, funding agencies and sub-agencies, contractors and sub-awardees, over the long-term and the latest complete federal fiscal year. The work was primarily performed in Massachusetts and the vendors who were awarded the contracts may or may not have been located in Massachusetts.

State Revenues. Taxes collected by all states in FY 2018 totaled \$1,030.5 billion, 5.5 percent more than in FY 2017. Massachusetts collected \$29.7 billion in FY 2018, 5.2 percent more than in FY 2017. Massachusetts ranked ninth in the nation in total taxes collected in 2018.

In FY 2018, the national average of tax collection from individual income tax and sales and gross receipts tax was 84.8 percent of total revenue. Massachusetts collected most of its revenue, 54.9 percent, from individual income taxes, while overall states collected 38.1 percent of their revenue from individual income taxes. Seven states do not have an individual income tax.

State Lottery Proceeds. Massachusetts ranked fourth in revenue, \$5.21 billion, and fourth in prize money awarded, \$3.8 billion, among the 44 states with lotteries in FY 2017. Massachusetts lottery revenue decreased 4.8 percent compared to the previous year.

State Expenditures. The following tables and graph depict FY 2017 per capita state government general expenditures in inflation-adjusted dollars by category for the six New England states and the U.S. average state expenditures. Massachusetts ranked eighth in the nation in per capita expenditures, \$9,923 in 2017, while it ranked eighth and spent \$9,694 in 2016. This represents a 2.4 percent increase in per capita expenditures from 2016 levels, with the largest per capita dollar increase in the Public Welfare function.

Home Sales. Sales of existing single-family homes for Massachusetts and the U.S. are presented in the following table and graph. The state existing-home sales report includes single-family houses, condos and co-ops.

EXHIBIT A-Appendix-3 QUARTER 4, FY 2019

Home prices. Massachusetts sales prices are much higher than the national median but they are 25.9 percent less than the 2004 peak.

EXHIBIT A-Appendix-4 QUARTER 4, FY 2019

Electricity Prices, Supply and Capacity by Source. Massachusetts had the fourth highest electric rate in the country in 2017, 17.54 cents per kilowatt hour in 2018 dollars, while the U.S. average was 10.74. Adjusted for inflation, this was an increase of 1.7 percent for Massachusetts and a decrease of 0.1 percent for the U.S. from the previous year. Massachusetts electric utilities generated \$9.2 billion in revenue in 2017. This was 0.1 percent less than in 2016, while they sold 1.8 percent less electricity. The Massachusetts Net Electricity Trade Index, which represents the state's electricity self-sufficiency, was 0.57 in 2017, the latest data available. In 2017, 68.8 percent of Massachusetts electricity was generated by burning natural gas, our top fuel source for power generation.

Travel and Tourism. The Massachusetts Office of Travel and Tourism (MOTT) reported a 0.3 percent decrease in 2018 museum and attraction attendance compared to 2017, with 12.5 million visitors. Museum attendance was up 4.8 percent in April 2019 for the calendar year compared to April 2018. For April FY 2019 year-to-date, net room occupancy tax collections totaled \$231.8 million, a 8.2 percent increase from the same period in FY 2018.

Transportation and Warehousing. Massachusetts' major air and seaports are managed by the Massachusetts Port Authority (Massport), an independent public authority. Based on total passenger volume data for calendar year 2017, Logan Airport was the most active airport in New England and the 16th most active in the U.S. according to the Federal Aviation Authority. Massport reported that as of April 2019 year-to-date, total airport flight operations were up 1.6 percent and total airport passengers were up 4.0 percent from the same period in 2018. According to the FAA, in calendar year 2018, Logan Airport ranked 28th in the nation in total air cargo volume. As of April 2019 year-to-date, Massport reported the airport handled 220.2 million pounds of cargo, a 0.03 percent increase from the same period in 2018. Massport reported that total express mail was up 2.6 percent from the same period in 2018. Please refer to the Aviation Activity tables on the following page.

Massport's Port of Boston properties processed 298,036 full TEUs (twenty-foot equivalent units) of containerized cargo in 2018, an increase of 10.0 percent from calendar year 2017. It also processed 52,400 automobiles, an increase of 5.7 percent, and 389,619 cruise passengers, a 0.4 percent increase, compared to 2017.

The Army Corps of Engineers reported Massachusetts total waterborne cargo shipped or received in 2017 decreased by 6.7 percent to 17 million short tons from 2016. Waterborne cargo in New England decreased 4.5 percent while the U.S. increased 4.1 percent. Please refer to the Waterborne Tonnage by State charts on the following page.
